1. Introduction

1.1 Overviews

E-business is a set of dynamic technologies, applications that link organizations, customers, suppliers, communities through electronic transactions along with electronic exchange of information products and services. It is conducted between businesses and consumers, on the other hand, is referred to as business-to-consumer (B2C). Online shopping is a form of electronic commerce where the buyer is directly connected online to the seller's computer usually via the internet. The E-business, which is based on the use of Internet technologies, is still being introduced to organizations, and developed in order to meet organizational goals, which are to achieve effectiveness and market competitiveness.

As, known to all, world is evolving rapidly in every sector i.e. information technologies, business, construction and automation etc. There is need of streamlining processes. Targeting construction business, customers often come across different problems i.e. availability of stock, lack of quality stock etc. So, all these problems makes construction process tedious and tiresome.

1.2 Background

Constructing buildings is a not an easy work. As, construction needs lots of materials which risks people in finding the suppliers. To find the materials, find the best quality materials and to carry away it to the place, where the work of construction is in progress.

E-Build [1] application brought out some solutions. The E-Build Pakistan team envisions to be the leading online market place for construction; digitalizing the façade of construction industry; the strategic aim of government and private organization to build communities cross Pakistan. Expending the rich of product and buyer of the construction products. The application was helpful to search construction materials on internet, which works in a specific area, if we find materials, so you will have to order it from really far away. E-Build provides the services like: Construction tools, paints tools, electric tools, bathroom tools, kitchen tools, floor tiling, lightening tools, hardware and wallpapers.

Tameer Ghar [2] is Pakistan's 1st and Largest Marketplace for Construction and Home Improvement Items. Tameer Ghar is a website, Started on 23rd March 2017, which also provides the services of constructions. But still, it is limited to a specific city (Karachi). Tameer Ghar is not only a marketplace for construction materials but also a benchmark for emerging construction market, helping many to brand an unbranded market. Tameer Ghar is an effort to provide an online market place for construction and renovation related work and material to facilitate the service providers and end user in the most cost effective and efficient manner. Tameer Ghar provides the services like: Construction tools, paints tools, electric tools, bathroom tools, kitchen tools, lightening tools, hardware and wallpapers.

The aforementioned system do not have facility to place order in the locality. They facilitate the users/customer in a different direction. They do not have facility for suppler to sell their goods/material. In addition they do not have solution for transportation.

1.3 Motivation

The motivation for developing the application is primarily an interest in undertaking a challenging tasks in the area of mobile application. Our motivation is increased, with the real life problem found in construction industry.

1.4 Problem Statement

The construction industry people frequently are facing issues like stock availability, lack of quality product, supplier. As a result of these issues, the construction process has become tiresome. Construction projects normally faces shortage of construction material during the project, which causes unwanted delay. Responsible person who is managing construction can undergo harsh situations where they need material for which is already short in market. Therefore, facing such type issues can cause delay in project sometimes lead to contract cancellation. Keeping in view all these problems, a solution is proposed to tackle such issues.

1.5 Aims and Objectives

The aim of the study is to provide a categorize digital access to construction material availability in locality. This system will bring a positive change of in construction industry.

Objectives

- To provide ease in business to customer as well as supplier.
- To ensure/make availability of materials on a single platform.

- To track order and delivery status.

1. Significance of the Study

The system is really important to digitalize the construction industry using mobile application rather than roaming manually behind each supplier. The system is beneficial for customer to find the availability of nearby material.
